Rural Sketches Of the Hawaiian Islands.

Leaving Lahaina for East Maui.

Tourists visiting East Maui, have three modes of going on from Lahaina—by steam or sail to Kalepelo or Makana, by schooner to Kahului, and horse-back "over the mountain." Each route has its recommendations, but the lover of the picturesque will choose the latter. Leaving Lahaina at six o'clock in the morning to avoid the hot sun, we rode over a level and sandy plain which skirts the foot of the mountains to Olanu, where the road ascends, but instead of leading over the mountains, it more correctly speaking, runs around it. The mountains of West Maui have an elevation of 5000 feet, and the road ascends perhaps 1500 feet. It is possible for animals, but might be very much improved, with no great expense.

From the highest point of the road, where it begins to descend towards Wailuku, is one of the most picturesque scenes that the islands afford, and worthy of a painter's pencil. To enjoy it, we dismounted from our horses. Before us was the colossal mountain of HALEAKALA, stretching from the rocky shores of Kooloa, to the prominent knoll that lies under Ulupalaka, a distance of thirty miles, and rising in one grand, symmetrical and noble mountain 10,000 feet above the sea. Not a cloud was on it, and its outline rested boldly against the sky, while its sides were clothed with forests, and varied colored verdure. At the left in the distance were Makawao and Haiku with their white houses and mill buildings, and at the extreme right the white chimney of the Makua mill could be observed. Beneath us lay the broad bay of Kalepelo, with the schooners *Nattie* and *Annie Laurie* moving across it. A low sandy and desert isthmus stretches from the bay to the ocean at the left, where is the port of Kahului. Nowhere is there a scene of more grandeur than from this point. Haleakala, the famous House of the Sun, is a miracle of itself, which no traveler in search of the marvelous should fail to visit. While we were admiring the view, a gentleman who had just returned from a visit to the mountain met us, and offered a narrative of it, which we cheerfully insert, and which very appropriately comes in here. We therefore leave our notes of Wailuku and Wailuku for another week:

A Trip to Haleakala.

Our guides were procured, and all the necessary arrangements completed for the ascent of the mountain. There are two routes to the summit, one from Ulupalaka, on the southwest side, and the other from Makawao, on the north side. We concluded to make the ascent from the latter place, as it is much the easiest road, and the finest view is obtained from the northern summit. On Friday morning at ten o'clock, our party, consisting of Mr. and Mrs. T. of San Francisco, and myself, left Makawao for the mountain, preceded by native guides with provisions, tent, bedding, &c. We were mounted on horses that have made the trip several times before, but were obliged to ride slow, as the road in some places was quite steep. We got along without any difficulty, reaching the spring at 1 o'clock, which is considered half way to the summit. There dismounting we partook of a luncheon, filled our water bag, and watered our horses, or rather we would drink. Some of them refused, for we could not impress on them the fact that they would get no more water until the next afternoon when we should reach the same spring on our way home. We remained here about half an hour, and then remounting started for the summit. The mountain was growing more difficult of ascent now, being steeper and very rocky; but we rode slowly, resting our horses often, and occasionally dismounting one of our guides to gather for us some berries, which grow in abundance on the mountain side. At three o'clock we reached the cave, which is some two miles below the summit, and about three thousand feet to ascend in going that distance. Our horses were not at first inclined to enter it, but by dint of whipping and spurting, and a good deal of moral suasion, we succeeded in starting them, and in one hour we stood on the summit of Haleakala, "The House of the Sun," 10,000 feet above the level of the sea. 4,000 feet above the clouds.

We have read many pages of history and graphic descriptions of eminent tourists; we have heard verbal descriptions of visits to Vesuvius and Etna, and other wonders of the world; we have dreamed of volcanoes and extinct craters; but never in our flights of imagination, have we conceived of anything that could approximate to the scene now before us. The view, not exceeding ten seconds, is sufficient compensation for all the difficulties attending the ascent. The crater is eight miles in diameter, and some thirty-two miles in circumference, and 2,500 feet in depth inside, an excavation sufficiently large to contain all the buildings of the city of New York, Philadelphia, and Boston, and then have room for a forest of trees. The crater is eight miles in diameter, and some thirty-two miles in circumference, and 2,500 feet in depth inside, an excavation sufficiently large to contain all the buildings of the city of New York, Philadelphia, and Boston, and then have room for a forest of trees. The crater is eight miles in diameter, and some thirty-two miles in circumference, and 2,500 feet in depth inside, an excavation sufficiently large to contain all the buildings of the city of New York, Philadelphia, and Boston, and then have room for a forest of trees.

It is hardly possible to describe the appearance of the crater, which was when it was an active sea of liquid lava. The cinders which are deposited all over its summit, give evidence that at some period the lava must have been thrown out over its highest peaks, but it is beyond the power of conception to form any idea of the appearance of a lake of fire twelve miles in diameter, thirty-two miles in circumference and twenty-five hundred feet deep. The fringes of nature are beyond the comprehension of man, and some of them will not even admit of a fictitious explanation. There is very little vegetation in the crater, except high up on the sides.

Let us turn from our view of the crater and gaze out over the sea. Its vast and boundless extent, from where the foam crested breakers lash themselves in fury on the coast rocks, far out to the line marked by the distant horizon, is covered with a billowy sea of clouds, so compact, that not one wave of the ocean is visible. There they lay apparently motionless, thousands of feet below us. The vast black bars, the piled-up masses of burnished gold, the beds of softest saffron and richest purple lying surrounded with continually fluctuating discs of crimson, like one vast kaleidoscope, till the very sun itself was for moments unheeded in the gorgeousness its light had created; the appearance of storm, but the feeling of calm over all that tumultuous yet settled world of clouds, that had come floating silently and majestically together, so silently that one knew not from whence

they came or whither they went. The clouds seemed to rest themselves on the waves of the sea, and the great bright orb was now resting its rim on the clouds, and as it continued to sink behind them it had the appearance of a mighty ship at sea far out on the horizon. And the clouds gave the appearance of gigantic billows, tempest tossed and ready to engulf it. And they seemed to accomplish their purpose; for the sun is now lost to view, but the golden tint still remains half encircling the clouds, and looking like one continual blaze of chain lightning. The scene was truly grand and sublime, surpassing anything ever beheld or pictured in the imagination. It was the first sunset that we had ever seen from a point above the clouds, and were we to live a thousand years the scene would never pass from our mind. We remember belonging to a debating club, and this question came up for discussion: "Resolved—that the works of art are superior to those of nature." We exposed the side of art, but had not at that time visited the crater of Haleakala, or witnessed a sunset thousands of feet above the clouds.

This scenery, and in fact, nearly all that these islands can boast of, has been passed comparatively unheeded, and distinguished tourists have barely mentioned it. "There is an inexpressible charm," says Campbell, "imparted to every place that has been celebrated by the historian, or immortalized by the poet, a charm that dignifies it in the eyes of the stranger and endears it to the heart of the native inhabitant." Of this romantic attraction these islands are almost destitute, although the scenery here has not its equal anywhere in the world. While every insignificant hill and forest in classic Europe has been followed by the visitations of the muse, and contemplated with fond enthusiasm, our lofty mountains and beautiful valleys draw not a poetical feeling, and pass unheeded, because unused. But we have wandered quite away from Haleakala, and the sunset we had just witnessed. This vast expanse of clouds could be seen until nearly midnight, and was almost as gorgeous under the rays of the bright moon, as it was in the sunlight. We were completely surrounded by them, and the only thing visible from this upper world, except the moon and stars, were the distant snow-capped summits of "Maunaloa" and "Maunakea" on Hawaii, very distinctly seen in the dim light. But even they were soon lost to sight, and as the last flickering ray of the sun died away, and we were in a gloomy pall of night, we felt how thoroughly isolated we were, and alone in our little world above the clouds. The black wind usually sweeps in fitful gusts over these summits, but this night it was hushed. The wind had died away until there was not enough to blow the smoke from our campfires. The chirp of a cricket would have been a relief from the painful monotony of silence. But all animal life, if there ever had been any here, was in a stupor, and we were obliged to keep our own resources for entertainment. We brought no chairs or seats of any kind with us, and so had to use sharp lava rocks instead. Parties who intend to make the ascent of the mountain, should provide themselves with a good supply of food, and a good supply of water, and a good supply of blankets, and a good supply of firewood, and a good supply of provisions, and a good supply of everything that they may need.

About five o'clock, we went to witness the sunrise. The sky was perfectly clear, the whole eastern horizon seemed to be ablaze. The clouds which enveloped the sea the evening before, had nearly all dispersed, and what remained seemed to melt and vanish beneath the rays of the sun. A portion of them were driven up by the morning winds through the eastern passage of the crater, filling it to the very summit. It was but three minutes from the time the first cloud entered the crater until it was filled; and they disappeared as suddenly, and almost unnoticed, as they had entered. The crater, which seemed to vanish the moment they struck the western summit of the mountain. After breakfast we started for a stroll along the summit of the crater. There is a plant growing on this mountain called the "silver cholla," which is said to be the only one of its kind in the world. Although not botanists, we had a great desire to secure a specimen of this plant, first on account of its being so rare, and again, that we had some something to take home to prove the fact of having visited the "House of the Sun." After walking some distance, we discovered, some forty feet down in the crater, a large sword-plant, and with some difficulty succeeded in obtaining it, although it took an hour to get it up by the rocks.

We had now seen all that could be seen—the ocean free from clouds and the ocean covered with clouds—the sun rising and the sun setting—the scene by moonlight and after the moon had set, the same scene by daylight. Our thirst for native scenery was satisfied. There is no where in the world, where one can see so much of the majestic, grand and beautiful in so short a time, as here on the summit of Haleakala. At ten o'clock we had our horses saddled and started for home, where we arrived a little past one, somewhat weary but feeling fully compensated for the trip. The lady and gentleman who were with us came along purposely from San Francisco to visit the crater, and they consider themselves fully repaid for the whole journey. The kindness of the residents of Makawao and the hospitality extended by them to strangers, is perfectly genuine and free from affectation, and as far as the experience of the writer extends, he has never in his travels met with its parallel.

(To be Continued.)

Business Cards.

J. H. COLE, AUCTIONEER.
(SUCCESSOR TO F. P. HERRICK.)
At his late rooms, Queen Street. 569-1y

H. W. SEVERANCE, AUCTIONEER, AND COMMISSION MERCHANT.
Fire-proof Store, Robinson's Building, QUEEN STREET, HONOLULU.
Will continue business at the new stand. 371-1y

Wilcox, Richards & Co. 402-6m

HONOLULU IRON WORKS.
STEAM ENGINES, SUGAR MILLS, BOIL-
ers, Coolers, etc., made to order. Iron and Brass Cast-
ings made and Jobbing executed.
At the Shortest Notice.
In order to meet the wants of the Hawaiian Islands, the Pro-
prietor of the Honolulu Iron Works has been induced to expend
a large sum of money in erecting new and costly machinery, on
such improved principles as to enable him to do work with un-
usual dispatch, in the best manner, and at most reasonable rates.
No one need go to the States to fill orders, as the work
can be executed at the Honolulu Iron Works as well, at as low
rates, and with as much dispatch as it can be at the former
places.
In the machine shop there are
Bolt Cutting,
Planing and Heavy
Lathes.
In the blacksmith shop there is a powerful steam blast which
enables us to do
Heavy Blacksmithing.
TERMS CASH. THOMAS HUGHES.
